LANGUAGES

Turkish Native
English B1 · Intermediate

TECHNICAL SKILLS

- PythonFlaskFastAPI
- PostgreSQL / SupabaseSQL
- KotlinJetpack Compose
- C# / ASP.NET CoreJavaScript
- SeleniumGit / GitHub
- REST API Design
- Local LLMs (Ollama)
- XGBoost / scikit-learnPyTorch
- pytest / Playwright

EDUCATION

B.Sc. Computer Engineering
Burdur Mehmet Akif Ersoy University
2020 – 2024 · GPA: 3.4 / 4.0

PROFILE

Computer Engineering graduate and full-stack software developer. I've built production-quality web and mobile applications — real-time messaging, security-first authorization models, and thorough automated test suites — as well as a local LLM-powered voice AI assistant. I also work independently on machine learning projects spanning financial forecasting, reinforcement learning, and explainable AI. I pick up new technologies quickly and ship them with discipline and test coverage.

EXPERIENCE

Software Development Intern Sep – Nov 2024
Ünver Group & Ünver Otomotiv

Built a chatbot using the Gemini API, LangChain, and C# that generated personalized responses from user data and translated natural-language requests into SQL queries, returning results as HTML/Excel output.

FEATURED PROJECTS

Artemis — Local Voice AI Assistant Python · Ollama · faster-whisper

A desktop assistant that controls the computer by voice through tool-calling on a local LLM. Built with a plugin architecture, faster-whisper speech recognition, a confirmation flow for dangerous operations, and 540 automated tests, with a strong focus on reliability and security.

Social Platform — Web & Native Android Flask · Supabase · Kotlin / Jetpack Compose

A full-featured social network with real-time messaging, stories, polls, and notifications. Implements row-level security policies for layered authorization, full feature parity between the web and native Android clients, and a broad Playwright/pytest test suite.

BorsaSite — Financial Forecasting System Python · FastAPI · XGBoost · FinBERT

An end-to-end forecasting pipeline combining stock price data with news sentiment. FinBERT/Turkish-BERT sentiment scores feed an XGBoost model alongside technical indicators (RSI, MACD, SMA) to predict next-day direction; served via FastAPI with an automated daily data-refresh and retraining pipeline.

Other projects: a full-stack blog platform built with ASP.NET Core + React/TypeScript (maintenance-stage) · reinforcement learning from scratch (Q-learning and PyTorch DQN) playing Snake · house-price prediction via Selenium data collection and regression modeling · explainable AI (XAI) studies using SHAP, LIME, and DALEX.
